Paper experiments

Paso 1

- Filtré cumpliendo 2 condiciones: palabra clave (TS) y categoria de las que habiamos establecido (WC).

TS=("field experiment" *OR "survey experiment*" OR "audit stud" *OR "correspondence experiment*" OR "correspondence audit" *OR "conjoint experiment*" OR "conjoint analy" *OR "list experiment*" OR "factorial experiment" *OR "factorial survey*" OR "vignette experiment" *OR "vignette survey*") AND WC=("Education & Educational Research" OR "Economics" OR "Management" OR "Political Science" OR "Business" OR "Social Sciences, Interdisciplinary" OR "Communication" OR "Sociology" OR "Computer Science, Artificial Intelligence" OR "Computer Science, Interdisciplinary Applications" OR "International Relations" OR "Statistics & Probability" OR "Computer Science, Theory & Methods" OR "Health Policy & Services" OR "Social Work" OR "Public Administration" OR "Urban Studies" OR "Women's Studies" OR "Social Issues" OR "Social Sciences, Mathematical Methods" OR "Family Studies" OR "Development Studies" OR "Cultural Studies" OR "Demography" OR "Gerontology" OR "Social Sciences, Biomedical")

- Filtros manuales dentro de wos
  fechas: 1990-01-01 a 2026-06-01 publication date

filtre document type:

- early access y articles (solo esos 2)
- Con esos filtros quedo en: 20,007 (09.06)

Paso 2

TS=("field experiment" *OR "survey experiment*" OR "audit stud" *OR "correspondence experiment*" OR "correspondence audit" *OR "conjoint experiment*" OR "conjoint analy" *OR "list experiment*" OR "factorial experiment" *OR "factorial survey*" OR "vignette experiment" *OR "vignette survey*") AND WC=("Psychology, Multidisciplinary" OR "Psychology, Clinical" OR "Psychology, Applied" OR "Psychology, Experimental" OR "Psychology, Developmental" OR "Psychology" OR "Psychology, Social" OR "Psychology, Educational" OR "Psychology, Psychoanalysis" OR "Psychology, Biological" OR "Psychology, Mathematical")

fechas: 1990-01-01 a 2026-06-01

filtre document type:

- early access y articles (solo esos 2)
- Con esos filtros quedo en: 2,975

Paso 3 Aplirque el or para los querys - Esto es para saber el universo

#2 OR #1

- Con este filtro quedo en : 21,919

filtre document type:

- early access y articles (solo esos 2)

Paso 4

Es la idea de nuestro query 1:

CU=(Argentina OR Bolivia OR Brazil OR Chile OR Colombia OR "Costa Rica" OR Cuba OR "Dominican Republic" OR Ecuador OR "El Salvador" OR Guatemala OR Honduras OR Mexico OR Nicaragua OR Panama OR Paraguay OR Peru OR "Puerto Rico" OR Uruguay OR Venezuela)

fechas: 1990-01-01 a 2026-06-01

filtre document type:

- early access y articles (solo esos 2)

busque solo esto para saber produccion afilida a estos paises: resultados: 2,180,047

Paso 5 junte el paso 3 y 4

luego uní #3 AND #4

Esto da un total de: 597 (es una de nuestras bases de datos finales)

Paso 6

idea del "" Query 2:"

busque solo esto para saber produccion que nombra a estos paises entre 1990-01-01 to 2026-06-01: 763,841

TS=(Argentina OR Bolivia OR Brazil OR Chile OR Colombia OR "Costa Rica" OR Cuba OR "Dominican Republic" OR Ecuador OR "El Salvador" OR Guatemala OR Honduras OR Mexico OR Nicaragua OR Panama OR Paraguay OR Peru OR "Puerto Rico" OR Uruguay OR Venezuela OR "Latin America" OR "South America")

filtre document type:

- early access y articles (solo esos 2)

Paso 7

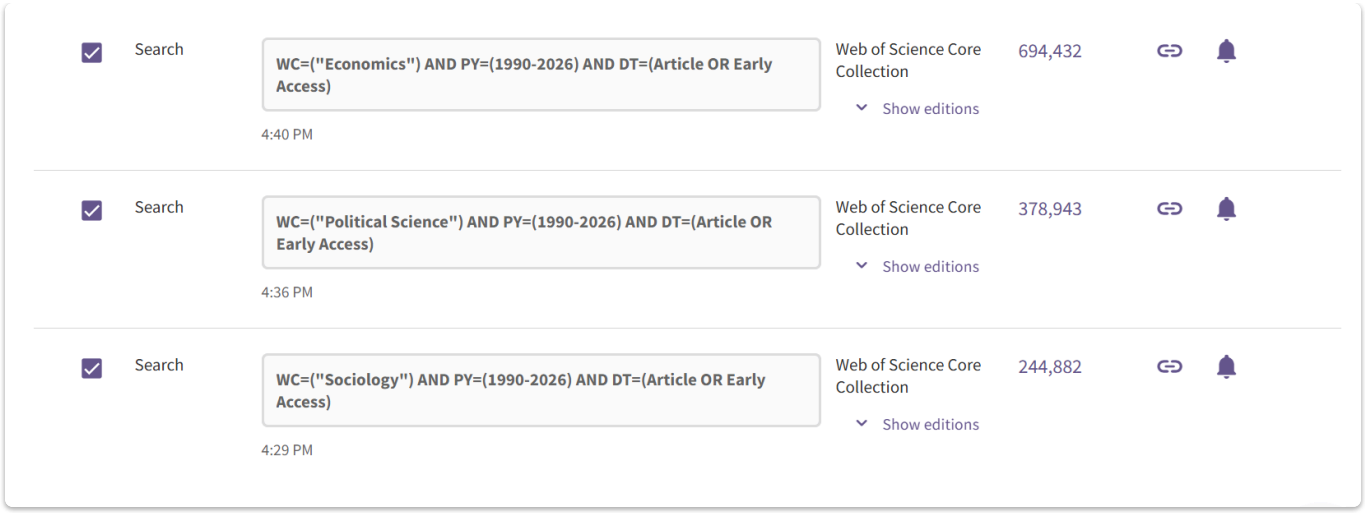

#3 AND #6** 694

filtre document type:

- early access y articles (solo esos 2)

Esto da un total de: 694 (es la otra base de datos final.

Luego para sacar los N total por disciplina cada año lo hice asi

Outline propuesta:

1. Introduction

- The Credibility Revolution & The WEIRD Bias: Briefly introduce how experimental methods (survey, field, conjoint) have become the gold standard for causal inference in social sciences. Note that these methods are disproportionately applied to WEIRD populations.
- Latin America's Potential and Paradox: Frame LATAM as a theoretically rich context (informality, structural inequality) , yet highlight the systemic barriers (financial, methodological) to conducting experiments there.
- The Gap in the Literature: State that while there are reviews of experimental methods in general, none systematically map *who* is doing this in LATAM, *how*, and *what* the methodological challenges are.
- Roadmap: Outline the paper (bibliometric mapping → methodological trends → practical agenda).

2. Data and Methods

- Database Strategy: Explain the systematic extraction from Web of Science (1992-2026).
- The Two Dimensions (The core of your WoS strategy): * *Dimension A (Thematic Focus):* Articles studying Latin American populations/territories.
    - *Dimension B (Institutional Affiliation):* Articles with Principal Investigators based in Latin American institutions.
- Data Processing: Briefly mention the deduplication process and the keyword grouping (Conjoints, Vignettes, Audit, Field, etc.) to clean semantic noise.

3. Mapping the Field: The Evolution of Experimental Methods

(This section relies entirely on the R scripts we built!)

- 3.1. Temporal and Disciplinary Growth:
    - *Chart to include:* Relative Penetration Rate (Line Chart). Show how experiments per 10,000 papers have grown in Political Science, Economics, and Sociology.
    - *Chart to include:* 100% Stacked Bar Chart (Disciplinary Composition). Visually demonstrate the hegemony of Economics and Political Science over time, and the marginalization of Sociology.
- 3.2. The Methodological Toolkit:

    - *Chart to include:* **Absolute Prevalence of Methods (Horizontal Bar Chart)**. Show the dominance of Survey Experiments and Conjoints vs. Field/Audit studies. Discuss *why* (likely cost and feasibility).
    - *Chart to include:* **Cross-tabulation (Method x Discipline)**. e.g., Economics uses more Field Experiments; Political Science leans on Survey/Conjoints.
- **3.3. The Geographical and Authorship Imbalance:**
    - *Chart to include:* **The Authorship Gap (Bar/Pie Chart or Line)**. Contrast the high number of papers *about* LATAM (Mexico, Brazil, Colombia) vs. the low number of papers *led by* LATAM researchers (highlighting the 83% Global North leadership).
    - *Discussion:* Reframe "endógeno" as a structural gap between the region as a *setting* and the region as a *producer*.
- EEUU comparado con latam
- comparacion produccion total paises /disciplinas.
- principales disciplinas por menciones y tematicas principales x N y juntar los n pequeños
- total cuando son lab / endogeno y cuanto son endogenos
- si es de las core sociolog,y political scinece economics, psicologia, bussines/managment

4. Substantive Applications: What are we testing in LATAM?

- Highlight 2-3 prominent thematic clusters found in the dataset (e.g., Clientelism/Corruption in PolSci; Labor market discrimination in Economics/Sociology).
- Use specific landmark papers from your dataset to illustrate how experiments were uniquely suited to answer these LATAM-specific questions.

~~5. A Practical Agenda: Doing Experiments in Latin America~~

~~*(Inspired by the "Best Practices" from your model papers, but tailored to your findings).*~~

- ~~**Adapting to Regional Constraints:** How to design Survey Experiments / Conjoints when facing digital divides, varying literacy rates, or lack of trust in institutions.~~
- ~~**Cost-Effective Alternatives:** If Field Experiments are too expensive for local researchers (as shown in the data), how can Vignettes or List Experiments serve as rigorous, viable alternatives?~~
- ~~**Addressing the Representation Gap:** The ethical and methodological need for more locally-led research (better contextual knowledge translates to better experimental treatments).~~

Tareas

- Comenzar filtrado de disciplina para ver como unir las disciplinas presentes en las bases filtradas (core + algunas)
- Producción total EEUU entre 1990-2026 (producción total por cada disciplina core) - experimentos "palabras claves" de experimentos.
- sacar el total de producción disciplinar para los topic que faltan (psicologia/ bussines-managment)
- por países x año x disciplina : n total por país tenemos que considerar los 2 filtros de paises CU y TS
